Spring Boot

Kube by Example

Setting Up Your Development Environment

Development Environment

- Any OS supporting Java Development - macOS, Windows, or Linux
- 8 GB Ram, 16 GB+ preferred
- Java 11 or higher
  - Oracle Java or OpenJDK
  - Must have JDK Installed
- Docker Engine 20.10.0 or higher

Build Tools

- Maven version 3.6.0 or higher
  - Ideally installed for command line use

Verify Your Environment

- Verify Java installed: java -version
- Verify Java JDK installed: javac -version
- Verify Maven is installed: mvn -v
- Verify Docker is installed: docker ps

IDE - IntelliJ Ultimate

- IntelliJ Ultimate is used in course
- Not required
- All source code examples are IDE agnostic
  - Maven is the build tool
- Free IDE Options include: STS, Eclipse, and Netbeans

Kubernetes

- You will need access to a Kubernetes cluster
- Online you can use OpenShift Playground for free
- Locally you can run a single node cluster
  - Docker Desktop (easiest if you have Docker Desktop installed)
  - minikube (VM based)
  - kind (Docker based)
- kubectrl configured to connect to your cluster option
